Worldwide Courier Selects Voice Mobility Messaging Solution

VANCOUVER, BC, CANADA – April 10, 2008 – Voice Mobility International, Inc. (TSX: VMY, OTCBB: VMII and FWB: VMY), a Vancouver-based developer and provider of carrier and enterprise enhanced messaging solutions, today announced that they have installed the UCN 250 Linux messaging solution at a global courier company.

VMI has been testing with the client since June, 2007. After an extensive battery of functionality and integration tests the client is very happy with the performance of the product and the support received from Voice Mobility.

The move to Voice Mobility's UCN 250 will allow the client to flatten and consolidate their messaging infrastructure. All North American sites will be routing voicemail traffic to a centralized location. The benefits the client experiences are:

- Lower support costs as there is no need to support legacy messaging platforms at each depot or office site
- Easy maintenance of one large redundant messaging solution
- Support for a mixed dial plan
- Growth of the UCN 250 from 2700 users today to over 100,000 users when fully deployed
- Customized portal for remote employees to access and manage their messages

"The client evaluated solutions from leading IPT providers before selecting the Voice Mobility UCN 250", said Mike Seeley, VP of Sales. "The VMI Team is extremely happy with the technology and application fit of the UCN 250 in the courier / transport market. As with large enterprise and campus markets, the courier market can benefit from the solutions provided by Voice Mobility and its certified distributors."

The UCN 250 is a large scale Linux solution for enterprise, campus, hosted and managed service accounts.
