Voice Mobility's UCN Messaging Application Suite Adds Speech, Presence, Desktop Integration and Mobility Functionality

SAN FRANCISCO, CALIFORNIA – August 21, 2007 – Voice Mobility International, Inc. (TSX: VMY and OTCBB: VMII), a Vancouver-based developer and provider of carrier and enterprise messaging solutions, today at VoiceCon 2007 announced the addition of industry leading functionality to its product line.

"As of today, Voice Mobility offers a full messaging suite comprising Unified Messaging, mobility and presence, which enhances our carrier-grade messaging platform", said Randy Buchamer, Voice Mobility's CEO. "Our extensive product line far exceeds any product in the market today. Our solutions provide all the functionality required by small- to medium-sized businesses, enterprises and hosted providers. In addition, our unique solution allows businesses to utilize their existing voice and data equipment, rather than the costly upgrades required by our competitors."

Voice Mobility's rich feature set includes mobility, presence management support, and multilingual speech-enabled auto-attendant. Its design follows Voice Mobility's philosophy of supporting an organization's existing telephony environment with a range of messaging systems (including Octel) using industry-standard networking protocols (VPIM, IMAP and AMIS).

- + The product line supports many email systems including: Lotus Notes™, Novell GroupWise®, and Microsoft® Exchange™ 2000/2003.
- + The platforms come in a variety of configurations to meet needs of small businesses to large enterprise customers.
- + Unified Communications solutions provide simple integrated platforms for small to large enterprises, integrating enterprise telephony, messaging, mobility and presence into a unified platform. It works with more than 250 different TDM- and IP-based telephone systems.
- + Mobility solutions leverage Nuance's speech technology to enable access to live communications anywhere. Mobility works with a complete range of mobile devices and any enterprise telephone system. Voice Mobility's platform integrates mobile workforces and provides cost savings to current mobile strategies and infrastructures.

- + Presence changes end-user behavior as callers know the receiver's availability in advance of initiating a call. Callers can "ping" the user with a short message if the receiver is not present. This new functionality includes real-time presence management that delivers live communications between voice and data networks. It enables organizations to know in real time the status and availability of their workforce, providing individuals the tools to communicate with one another, leveraging both data and wireless networks for instant text and SMS messaging from any device.

The complete product line is available through Voice Mobility's reseller network and enhances the previously announced aggressive distribution expansion program. For more information on Voice Mobility's solutions, or for Partner programs, please contact Mike Seeley at sales@voicemobility.com.

About Voice Mobility, Inc.
